

SciCare Broadband Services

SciCare has partnered with cable operators every step of the way to help create much of the cable infrastructure in place today. Our extensive experience in managing this core technology, in addition to an ability to coordinate with third party system vendors enhances our ability to offer full installation, integration, training and technical support services that address all aspects of deploying, operating and optimizing your network.

Whether you need support for major analog-to-digital migration, the launch of on-demand services, or fast turnaround equipment swaps to improve bandwidth use and performance, SciCare can provide a dedicated, experienced team of people with skills to meet your business and operational requirements.

Because we pull from a breadth of experience, our services provide an extensive portfolio of solutions, based on our customers' business needs to help you mitigate risk:

- Program and Project Management
- System Design and Engineering
- Headend, Hub and Facility Installation and Integration
- Network Architecture Upgrades/Expansions
- Operational Efficiency Assessments
- Digital Video Network and Application Integration
- Video on Demand Integration
- Maintenance and Support
- SDV, 1 GHz upgrades
